COMPREHENSIVE ANALYTICS REPORT

India Logistics Operations | Data Period: 2022–2024
2,000 Shipments | 7 Cities | 5 Carriers | 6 Product Categories

Prepared by Shakira | shakirashakijnsz@gmail.com | April 2026

1. Executive Summary

This report presents a comprehensive analysis of India logistics operations spanning 2022 to 2024, covering 2,000 shipments across 7 major cities, 5 carriers, and 6 product categories. The LOGISTIQ PRO dashboard provides real-time supply chain intelligence enabling data-driven decisions and end-to-end visibility.

TOTAL SHIPMENTS 2,000 Records in dataset	TOTAL REVENUE ₹2.68 Cr Avg ₹13,385/shipment	ON-TIME RATE 56.6% Delayed: 8.8%	AVG PROFIT/SHIPMENT ₹10,250 Total Weight: 101T
---	--	---	---

Key Findings

- Total revenue generated across the 2-year period was ₹2.68 Crore with an average shipping cost of ₹10,250 per shipment.
- The overall on-time delivery rate stands at 56.6%, with 8.8% of shipments delayed and 4.7% cancelled.
- Food category holds the highest delay rate at 10.86%, while Pharma is the most reliable at 6.7% delay rate.
- Delhivery carrier carries the highest risk score (11.3), while DHL has the lowest at 8.88.
- The Kochi > Kochi route is the highest-risk route with an 18.6% delay rate.
- Pharma generates the highest revenue (₹50.4 lakh) and profit across all product categories.

2. Home Dashboard

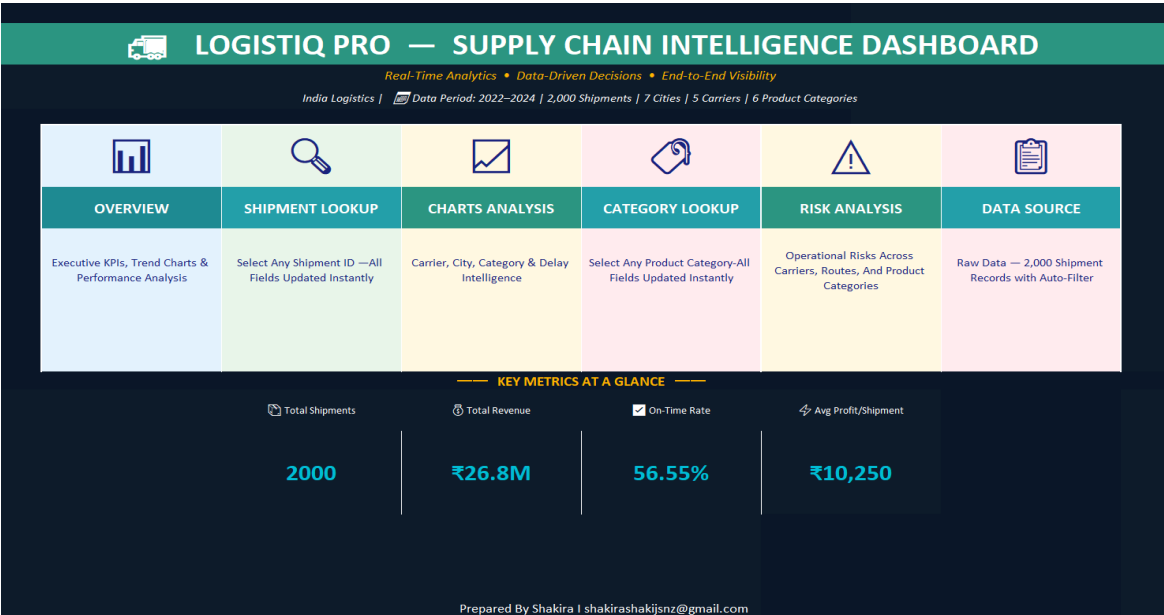

The Home page serves as the central navigation hub of the LOGISTIQ PRO dashboard. It provides a bird's-eye view of all key metrics and direct links to every analytical module of the system.

2.1 Dashboard Navigation

The Home dashboard features six interconnected modules, each accessible through intuitive navigation tiles:

- Overview — Executive KPIs, Trend Charts & Performance Analysis
- Shipment Lookup — Search any Shipment ID with all fields auto-updated instantly
- Charts Analysis — Carrier, City, Category & Delay intelligence visualizations
- Product Lookup — Category-level metrics powered by XLOOKUP
- Risk Analysis — Carrier, City, Category & Delay risk intelligence
- Data Source — Raw data with 2,000 shipment records and auto-filter

DHL	420	7.62%	4.05%	8.88
EcomExpress	374	9.09%	4.01%	10.61

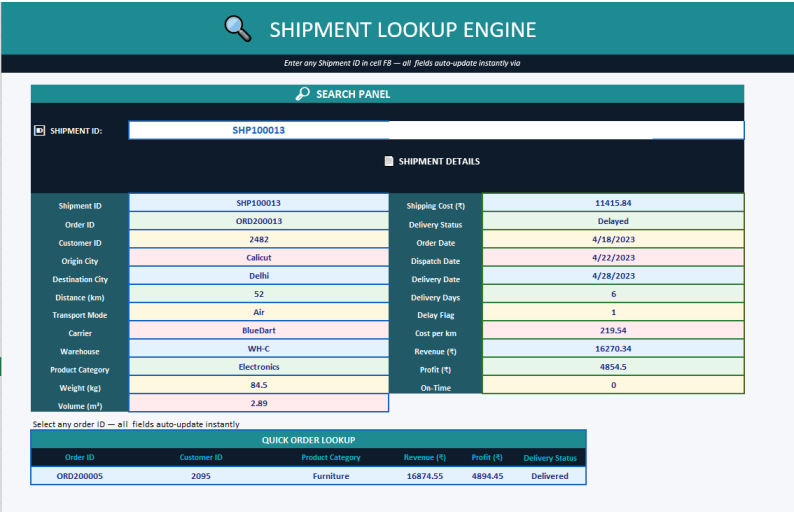

Key Insight — Carrier Performance

DHL is the top-performing carrier with the lowest risk score (8.88) and lowest delay rate (7.62%). Delhivery has the highest risk score (11.30) and highest delay rate (10.42%), indicating room for performance improvement.

5. Shipment Lookup Tool

The Shipment Lookup module enables users to search any Shipment ID and instantly retrieve all associated fields. This tool is powered by dynamic lookup formulas that update all 20+ fields simultaneously upon ID entry.

5.1 Shipment Lookup Screenshot

5.2 Available Lookup Fields

Field	Example Value	Description
Shipment ID	SHP100013	Unique identifier
Order ID	ORD200013	Linked order
Customer ID	2482	Customer reference

Kochi > Mumbai	41	6	14.63%	—	—	○ MEDIUM
Delhi > Mumbai	42	6	14.29%	—	—	○ MEDIUM

Risk Action Items

Priority 1: Investigate Kochi > Kochi intra-city route delays (18.6% rate — unusually high for short distance). Priority 2: Review Delhivery operations — highest risk score and delay rate across all carriers. Priority 3: Food category requires process improvements given its HIGH risk classification.

8. Data Source & Raw Data

The Data sheet contains 2,000 raw shipment records with auto-filter capabilities. Each record captures 20+ fields providing complete traceability from order creation to final delivery.

9. Strategic Recommendations

9.1 Carrier Optimization

- Prioritize DHL and BlueDart for high-value Pharma and Electronics shipments given their lower risk profiles.
- Engage Delhivery in a performance review — their 10.42% delay rate and highest risk score (11.30) demand corrective action.
- Negotiate SLA-backed contracts with all carriers to enforce delay penalty clauses.

9.2 Route Risk Mitigation

- Investigate and redesign the Kochi > Kochi intra-city route — an 18.6% delay rate for a short-distance route is a significant operational failure.
- Add buffer transit times for high-risk routes: Calicut > Mumbai and Calicut > Chennai.
- Evaluate Delhi > Bangalore routing — consider switching from current carrier/mode combination.

9.3 Category-Specific Actions

- Food logistics requires urgent improvement — 10.86% delay rate and HIGH risk classification suggest cold-chain or time-sensitivity issues.
- Replicate Electronics' low-delay best practices (8.14%) across other categories.
- Pharma revenue leadership (₹50.4 lakh) should be protected through dedicated premium carrier allocations.

9.4 Delivery Performance

- With only 56.6% on-time delivery, there is significant room for improvement. Target 70%+ on-time rate within 6 months.
- The 22.3% "Late >7 Days" rate is critically high and is the single biggest customer satisfaction risk.
- Implement real-time tracking alerts at 3-day, 5-day, and 7-day marks to enable proactive intervention.

10. Conclusion

The LOGISTIQ PRO Supply Chain Intelligence Dashboard provides a comprehensive, data-driven view of India logistics operations. With 2,000 shipment records across 7 cities and 6 product categories, the dashboard enables leadership to make informed decisions on carrier selection, route optimization, and category-specific strategies.

The most critical areas requiring immediate attention are: (1) the 22.3% rate of late deliveries exceeding 7 days, (2) Delhivery's performance gap relative to peers, and (3) the Food category's HIGH risk classification. Addressing these three priorities alone could significantly improve overall logistics efficiency and customer satisfaction.

The dashboard's interactive features — Shipment Lookup, Product Lookup, Risk Analysis, and Charts Analysis — provide operational teams with the real-time visibility needed to move from reactive problem-solving to proactive supply chain management.
